Coronavirus

What you need to know today!

What is Coronavirus?

Human Coronaviruses are common throughout the world. Some human Coronaviruses were identified many years ago and some have been identified recently. Human Coronaviruses commonly cause mild to moderate illness in people worldwide.

What are the symptoms?

Symptoms include fever, fatigue, dry cough, shortness of breath, and respiratory distress. Severe cases have resulted in pneumonia, kidney failure, and death in those with weakened immune systems.

Is there a treatment?

Currently there is **No** specific treatment or vaccine available.

How can it be prevented?

The best way to prevent illness is to avoid being exposed to this virus. However, as a reminder, CDC always recommends everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe.
- Wash your hands often with soap and water for at least 20 seconds, especially after going to the bathroom; before eating; and after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty.
